Professional's Choice.!

- Unique function and reliable design
- Detachable for improved cleaning capability and maximum hygiene and safety
- Avoids undesired trapping of tissue and debris
- All parts stay connected even when detached
- Large plastic trigger ensures that rongeur will not disengage during use and that gloves do not get caught in the trigger mechanism

- Ergonomic handle provides maximum comfort and control and helps to reduce fatigue
- Available in varying lengths and bite sizes
- On request lumbar versions available with integrated bone ejector for immediate bone removal (order code „E“)
- Optionally with a black ceramic coating for a reduced friction and no glare

*add „E“ behind catalog reference if desired with EJECTOR for immediate bone removal

1. Hold instrument as shown on picture (A) with the tip facing towards you and slightly press handle down. Observe the release nozzle marked in the picture (B) in red.
2. Press the black plastic trigger handle until the nozzle slips behind the bar, here marked in blue (C).
3. Release the handle slowly. The nozzle must always stay behind the bar. The upper shaft will now open up (D).
4. Instrument can now be thoroughly cleaned (E).

Attention: Do not press handle while cleaning as otherwise the nozzle will move out of the gap behind the bar (F). If this happens you must start with 1. and move it first back behind the bar (G) before reassembling!

5. For reassembling carefully push the upper shaft down into its fixation (H). Press the handle once with the other hand while still holding the upper shaft down. Instrument is then ready for use.

Attention: The reassembling process should work easily and smoothly. If it does not work, do not force or bend. Check and make sure the nozzle is in the gap.

Introducer Handle for Blades

Can also be used as a hand-held retractor

Fig.	Art.-No.	description
A	29-3615.01	black PPSU handle, 195 mm / 7 1/2"
B	29-3615 FL	black PPSU handle, 195 mm / 7 1/2" Luer-Lock straight-flush irrigation and locking mechanism, with Luer-Lock seal cap, silicone

Depth Gauge, Peek nature

to determine the appropriate blade length

Fig.	Art.-No.	description
C	29-3609	160 mm, measuring range 160 mm

Instructions for our new introducer handle with cannulation and snap mechanism

1. Introduce and position the blades with the handle into the incision.
2. Catch and snap-in the blade with one anterior hinge of the retractor without removing retractor.
3. Once the blade is properly placed in the retractor the handle can be removed if desired.

Retractor and Blades

- Easy positionable
- Quick-connect side-loading mechanism
- Easy change of blades during operation with a special introducer handle
- Non-slip fenestrated titanium blades
- Semi-transparency to x-ray
- Choice of 20 mm blades for monosegmental access, 40 mm for bisegmental access and 60 mm for multisegmental access
- Compact and strong retractor body with anterior titanium hinges
- Lightweight

Black + White Special Edition XX-XXXX/WK			German Colors Special Edition XX-XXXX/RKG		

Our micro needle holders are set for grasping needles without rotation. Please be sure to return instruments for periodic routine maintenance to keep them in very best condition. You can determine if a needle holder requires restoration of its Sapphire™ Enhanced

Needle Grip Surface by placing a needle at the very tip and then slightly pushing or pulling it or by holding the closed tip up against the light. If the needle easily moves, or if you see light gaps between the tips, the needle holder should be sent for service.

for healthy life

A periodontal probe is the most reliable instrument used to consistently determine the depth of periodontal pockets.

Periodontal probes vary in design and are distinguished by the millimeter markings that appear at varying intervals to determine pocket depth measurement.

Fig. 4

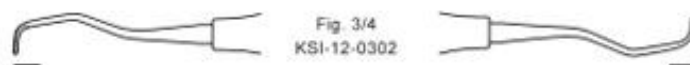

Our Gracey curettes are designed just like Dr. Clayton Gracey intended them to be. Gracey curettes are designed to adapt to a specific area or tooth surface.

Gracey curettes are also known as "Area Specific Curettes". Area-specific to allow for deep scaling, root planing and periodontal debridement.

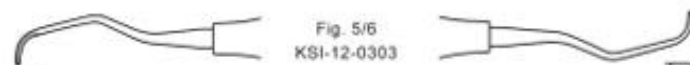

All Gracey's have one cutting edge on the lower side of the blade and a rounded toe. When re-sharpening a Gracey blade sharpen the lower edge and the toe only.

Slight contra-angle for anterior incisors and canines.

Short contra-angle for anterior incisors and canines.

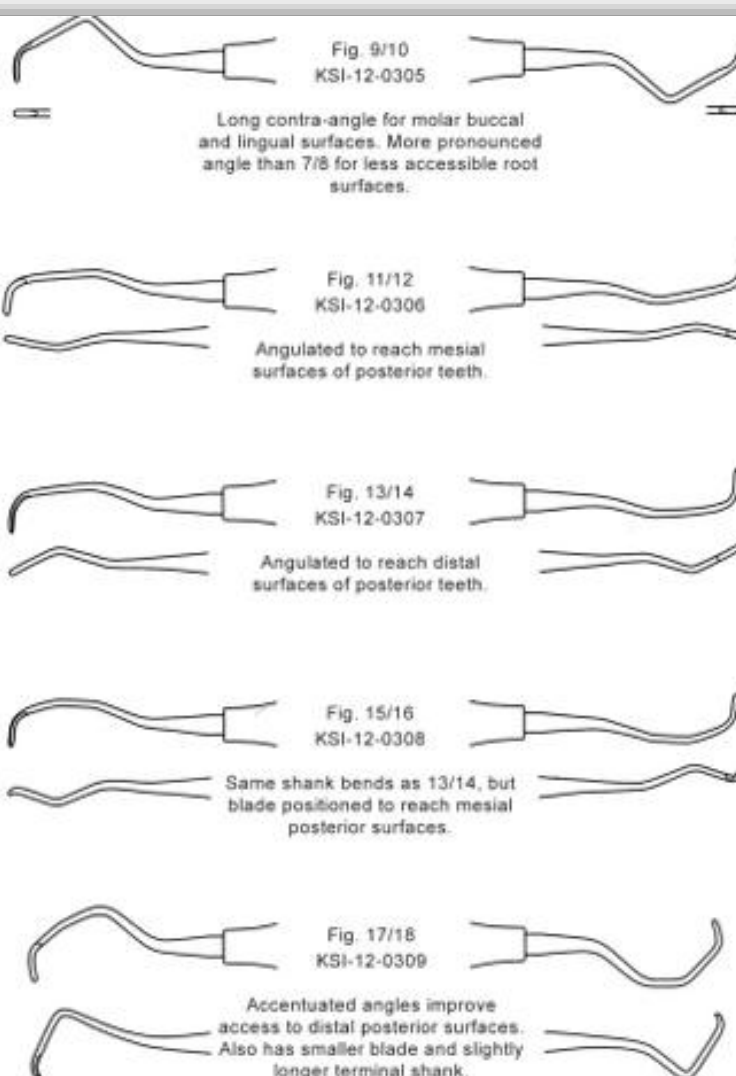

Medium contra-angle for anteriors and premolars

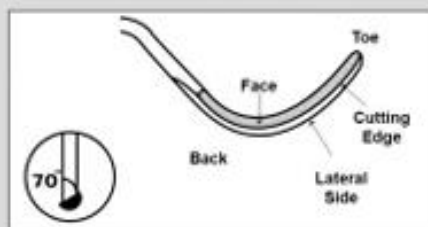

Medium contra-angle for premolars and molars, facial and lingual surfaces.

Hygimedical
for healthy life

The Gracey blade design is offset from the terminal shank at 70°. This creates one cutting edge which is referred to as the lower edge.

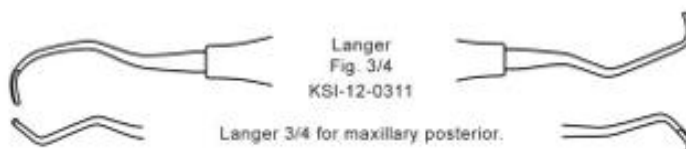

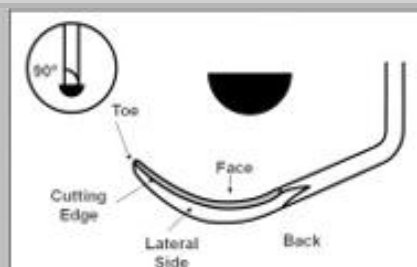

Tip

A complete set of Gracey curettes would include one for Anteriors, one for the buccal and lingual surfaces of pre-molars and molars, one for the mesial surfaces of pre-molars and molars and one for the distal surfaces of premolars and molars.

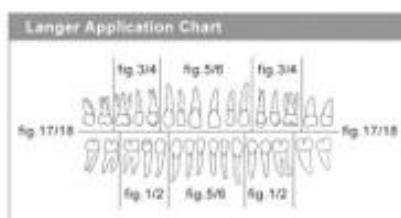

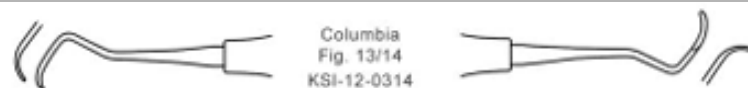

Universal curettes are designed for easy adaptation on all tooth surfaces (thus the name "universal").

The blade of a universal curette has a round toe and back, and two cutting edges for scaling, making it an efficient design for scaling the entire mouth.

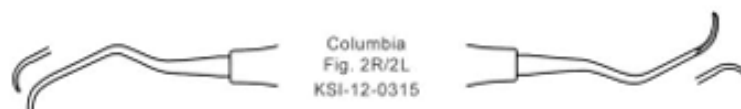

→ Langer curettes are designed with the shank design of a Gracey curette combined with a universal blade. These instruments can scale all surfaces.

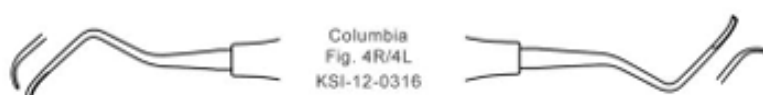

Incisors and lateral teeth, universal

Barnhart
Fig. 5/6
KSI-12-0319

→ The blade is correctly adapted when the toe is directed interproximally and the terminal shank is parallel to the tooth.

To remove deposits, the cutting edge is applied to the tooth surface and the facial surface of the blade is tilted toward the tooth to achieve a 70-85° angle between the tooth and the blade.

Apply lateral pressure against the tooth and pull upward while maintaining contact with the tooth.
